# Using Single-Row Functions to Customize Output

#### **Objectives**

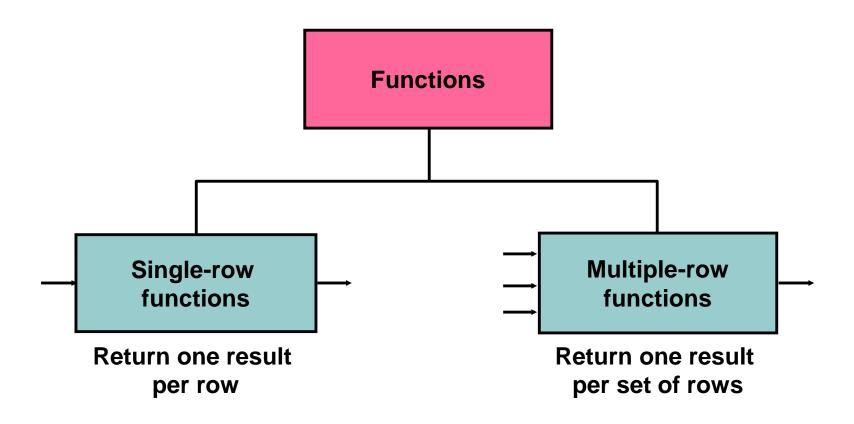

After completing this lesson, you should be able to do the following:

- Describe various types of functions that are available in SQL
- Use character, number, and date functions in SELECT statements
- Describe the use of conversion functions

#### **SQL Functions**

#### Two Types of SQL Functions

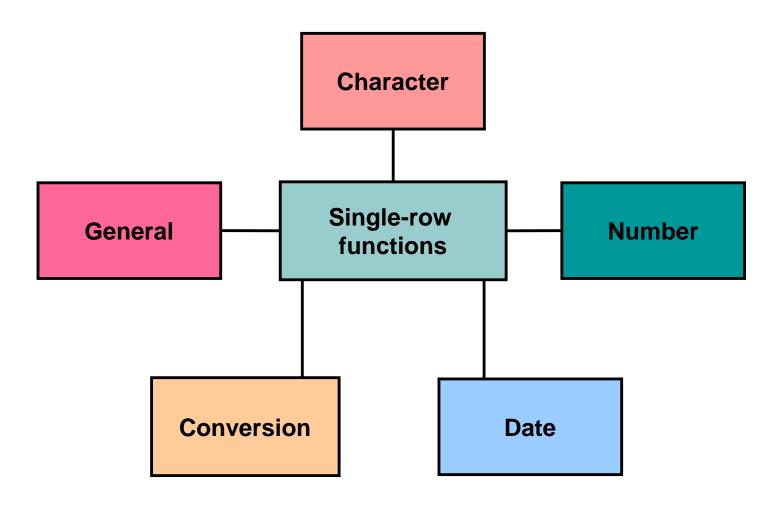

### **Single-Row Functions**

#### Single-row functions:

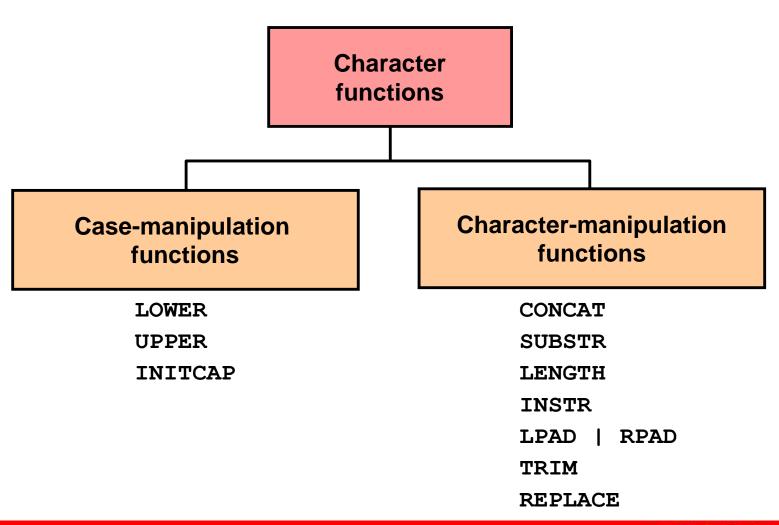

- Manipulate data items
- Accept arguments and return one value
- Act on each row that is returned
- Return one result per row
- May modify the data type
- Can be nested
- Accept arguments that can be a column or an expression

```
function_name [(arg1, arg2,...)]
```

# **Single-Row Functions**

#### **Character Functions**

# **Case-Manipulation Functions**

#### These functions convert case for character strings:

Function	Result
LOWER('SQL Course')	sql course
UPPER('SQL Course')	SQL COURSE
<pre>INITCAP('SQL Course')</pre>	Sql Course

### **Using Case-Manipulation Functions**

Display the employee number, name, and department number for employee Higgins:

```
SELECT employee_id, last_name, department_id
FROM employees
WHERE last_name = 'higgins';
no rows selected

SELECT employee_id, last_name, department_id
FROM employees
WHERE LOWER(last_name) = 'higgins';
```

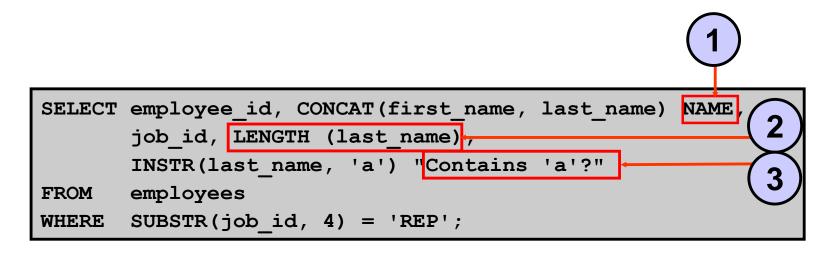

EMPLOYEE_ID	LAST_NAME	DEPARTMENT_ID
205 Higgins		110

# **Character-Manipulation Functions**

#### These functions manipulate character strings:

Function	Result
CONCAT('Hello', 'World')	HelloWorld
SUBSTR('HelloWorld',1,5)	Hello
LENGTH('HelloWorld')	10
<pre>INSTR('HelloWorld', 'W')</pre>	6
LPAD(salary,10,'*')	****24000
RPAD(salary, 10, '*')	24000****
REPLACE ('JACK and JUE','J','BL')	BLACK and BLUE
TRIM('H' FROM 'HelloWorld')	elloWorld

# Using the Character-Manipulation Functions

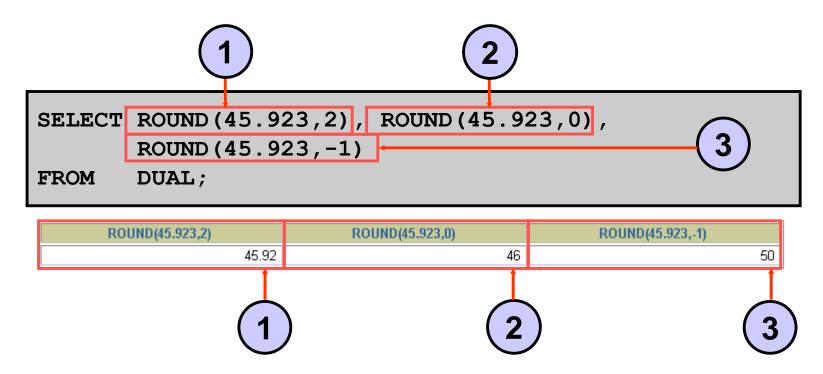

EMPLOYEE_ID	NAME	JOB_ID	LENGTH(LAST_NAME)	Contains 'a'?
174	EllenAbel	SA_REP	4	0
176	JonathonTaylor	SA_REP	6	2
178	KimberelyGrant	SA_REP	5	3
202	PatFay	MK_REP	3	2
	1		2	3

#### **Number Functions**

- ROUND: Rounds value to specified decimal
- TRUNC: Truncates value to specified decimal
- MOD: Returns remainder of division

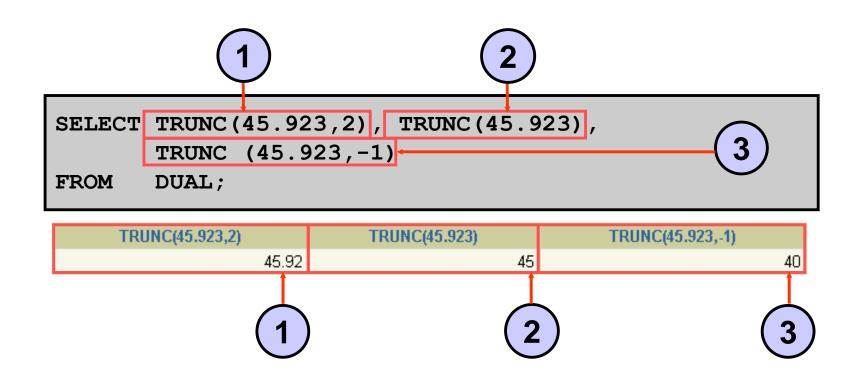

Function	Result
ROUND (45.926, 2)	45.93
TRUNC (45.926, 2)	45.92
MOD(1600, 300)	100

#### Using the ROUND Function

DUAL is a dummy table that you can use to view results from functions and calculations.

### Using the TRUNC Function

#### Using the MOD Function

For all employees with job title of Sales Representative, calculate the remainder of the salary after it is divided by 5,000.

```
SELECT last_name, salary, MOD(salary, 5000)
FROM employees
WHERE job_id = 'SA_REP';
```

LAST_NAME	SALARY MOD(SALARY,5000)	
Abel	11000	1000
Taylor	8600	3600
Grant	7000	2000

#### **Working with Dates**

- The Oracle database stores dates in an internal numeric format: century, year, month, day, hours, minutes, and seconds.
- The default date display format is DD-MON-YY.
  - Enables you to store 21st-century dates in the 20th century by specifying only the last two digits of the year
  - Enables you to store 20th-century dates in the 21st century in the same way

```
SELECT last_name, hire_date

FROM employees
WHERE hire_date < '01-FEB-88';
```

LAST_NAME	HIRE_DATE
King	17-JUN-87
Whalen	17-SEP-87

# **Working with Dates**

SYSDATE is a date function that returns the current database server date and time.

**SYSDATE** is a function that returns:

- Date
- Time
- SELECT SYSDATE FROM DUAL;

#### **Arithmetic with Dates**

- Add or subtract a number to or from a date for a resultant date value.
- Subtract two dates to find the number of days between those dates.
- Add hours to a date by dividing the number of hours by 24.

# Using Arithmetic Operators with Dates

```
SELECT last_name, (SYSDATE-hire_date)/7 AS WEEKS
FROM employees
WHERE department_id = 90;
```

LAST_NAME	WEEKS	
King	744.245395	
Kochhar	626.102538	
De Haan	453.245395	

#### **Date Functions**

Function	Result
MONTHS_BETWEEN	Number of months between two dates
ADD_MONTHS	Add calendar months to date
NEXT_DAY	Next day of the date specified
LAST_DAY	Last day of the month
ROUND	Round date
TRUNC	Truncate date

# **Using Date Functions**

Function	Result
MONTHS_BETWEEN	19.6774194
('01-SEP-95','11-JAN-94')	
ADD_MONTHS ('11-JAN-94',6)	'11-JUL-94'
NEXT_DAY ('01-SEP-95','FRIDAY')	'08-SEP-95'
LAST_DAY ('01-FEB-95')	'28-FEB-95'

# **Using Date Functions**

#### Assume SYSDATE = '25-JUL-03':

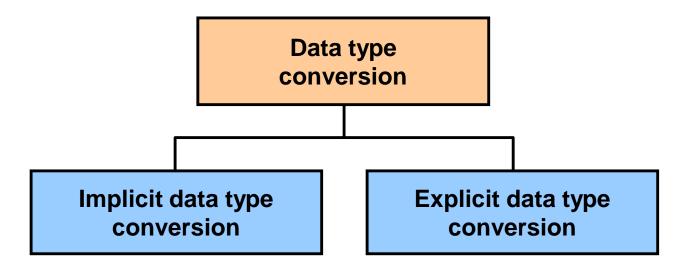

Function	Result
ROUND (SYSDATE, 'MONTH')	01-AUG-03
ROUND (SYSDATE , 'YEAR')	01-JAN-04
TRUNC (SYSDATE , 'MONTH')	01-JUL-03
TRUNC (SYSDATE , 'YEAR')	01-JAN-03

#### **Practice 3: Overview of Part 1**

#### This practice covers the following topics:

- Writing a query that displays the current date
- Creating queries that require the use of numeric, character, and date functions
- Performing calculations of years and months of service for an employee

#### **Conversion Functions**

### **Implicit Data Type Conversion**

For assignments, the Oracle server can automatically convert the following:

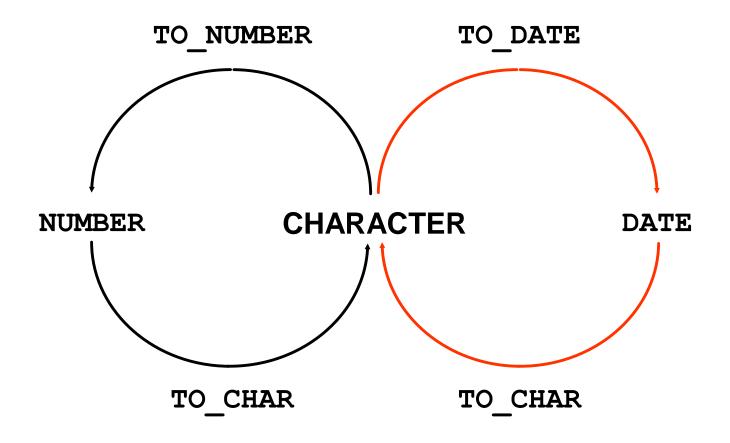

From	То
VARCHAR2 or CHAR	NUMBER
VARCHAR2 or CHAR	DATE
NUMBER	VARCHAR2
DATE	VARCHAR2

#### **Implicit Data Type Conversion**

For expression evaluation, the Oracle Server can automatically convert the following:

From	То
VARCHAR2 or CHAR	NUMBER
VARCHAR2 or CHAR	DATE

## **Explicit Data Type Conversion**

# Using the TO\_CHAR Function with Dates

```
TO_CHAR(date, 'format_model')
```

#### The format model:

- Must be enclosed by single quotation marks
- Is case-sensitive
- Can include any valid date format element
- Has an fm element to remove padded blanks or suppress leading zeros
- Is separated from the date value by a comma

#### **Elements of the Date Format Model**

Element	Result
YYYY	Full year in numbers
YEAR	Year spelled out (in English)
ММ	Two-digit value for month
MONTH	Full name of the month
MON	Three-letter abbreviation of the month
DY	Three-letter abbreviation of the day of the week
DAY	Full name of the day of the week
DD	Numeric day of the month

# Using the TO\_CHAR Function with Dates

```
SELECT last_name,

TO_CHAR(hire_date, 'fmDD Month YYYY')
AS HIREDATE

FROM employees;
```

LAST_NAME	HIREDATE	
King	17 June 1987	
Kochhar	21 September 1989	
De Haan	13 January 1993	
Hunold	3 January 1990	
Ernst	21 May 1991	
Lorentz	7 February 1999	
Mourgos	16 November 1999	

. . .

20 rows selected.

# Using the TO\_CHAR Function with Numbers

```
TO_CHAR(number, 'format_model')
```

These are some of the format elements that you can use with the TO\_CHAR function to display a number value as a character:

Element	Result
9	Represents a number
0	Forces a zero to be displayed
\$	Places a floating dollar sign
L	Uses the floating local currency symbol
•	Prints a decimal point
1	Prints a comma as thousands indicator

# Using the TO\_CHAR Function with Numbers

```
SELECT TO_CHAR(salary, '$99,999.00') SALARY
FROM employees
WHERE last_name = 'Ernst';
```

```
$6,000.00
```

# Using the TO\_NUMBER and TO\_DATE Functions

 Convert a character string to a number format using the TO\_NUMBER function:

```
TO_NUMBER(char[, 'format_model'])
```

 Convert a character string to a date format using the TO\_DATE function:

```
TO_DATE(char[, 'format_model'])
```

These functions have an fx modifier. This
modifier specifies the exact matching for the
character argument and date format model of a
TO\_DATE function.

### **Nesting Functions**

- Single-row functions can be nested to any level.
- Nested functions are evaluated from deepest level to the least deep level.

### **Nesting Functions**

```
SELECT last name,
    UPPER(CONCAT(SUBSTR (LAST_NAME, 1, 8), '_US'))
FROM employees
WHERE department_id = 60;
```

LAST_NAME	UPPER(CONCAT(SUBSTR(LAST_NAME,1,8		
Hunold	HUNOLD_US		
Ernst	ERNST_US		
Lorentz	LORENTZ_US		

#### **General Functions**

The following functions work with any data type and pertain to using nulls:

- NVL (expr1, expr2)
- NVL2 (expr1, expr2, expr3)

#### **NVL Function**

#### Converts a null value to an actual value:

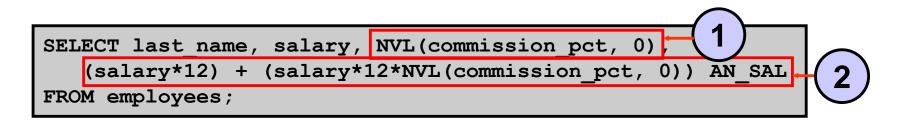

- Data types that can be used are date, character, and number.
- Data types must match:

```
- NVL(commission pct,0)
```

```
- NVL(hire_date,'01-JAN-97')
```

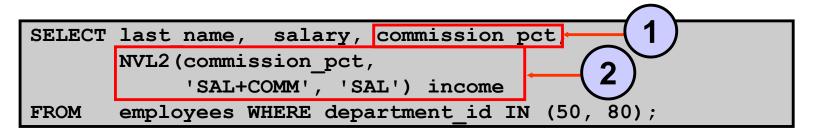

- NVL(job id,'No Job Yet')

### Using the NVL Function

LAST_NAME	SALARY	NVL(COMMISSION_PCT,0)	AN_SAL
King	24000	0	288000
Kochhar	17000	0	204000
De Haan	17000	0	204000
Hunold	9000	0	108000
Ernst	6000	0	72000
Lorentz	4200	0	50400
Mourgos	5800	0	69600
Rajs	3500	0	42000
■■ 20 rows selected.		1	) (2

# Using the NVL2 Function

LAST_NAME	SALARY	COMMISSION_PCT	INCOME
Zlotkey	10500	.2	SAL+COMM
Abel	11000	.3	SAL+COMM
Taylor	8600	.2	SAL+COMM
Mourgos	5800		SAL
Rajs	3500		SAL
Davies	3100		SAL
Matos	2600		SAL
Vargas	2500		SAL
rows selected.		1	) (2)

#### **Conditional Expressions**

- Provide the use of IF-THEN-ELSE logic within a SQL statement
- Use two methods:
  - CASE expression
  - DECODE function

#### **CASE Expression**

Facilitates conditional inquiries by doing the work of an IF-THEN-ELSE statement:

```
CASE expr WHEN comparison_expr1 THEN return_expr1
[WHEN comparison_expr2 THEN return_expr2
WHEN comparison_exprn THEN return_exprn
ELSE else_expr]
END
```

# Using the CASE Expression

# Facilitates conditional inquiries by doing the work of an IF-THEN-ELSE statement:

```
SELECT last_name, job_id, salary,

CASE job_id WHEN 'IT_PROG' THEN 1.10*salary

WHEN 'ST_CLERK' THEN 1.15*salary

WHEN 'SA_REP' THEN 1.20*salary

ELSE salary END "REVISED_SALARY"

FROM employees;
```

LAST_NAME	JOB_ID	SALARY	REVISED_SALARY
Lorentz	IT_PROG	4200	4620
Mourgos	ST_MAN	5800	5800
Rajs	ST_CLERK	3500	4025
•••			
Gietz	AC_ACCOUNT	8300	8300

20 rows selected.

#### **DECODE Function**

Facilitates conditional inquiries by doing the work of a CASE expression or an IF-THEN-ELSE statement:

#### Using the DECODE Function

LAST_NAME	JOB_ID	SALARY	REVISED_SALARY
Lorentz	IT_PROG	4200	4620
Mourgos	ST_MAN	5800	5800
Rajs	ST_CLERK	3500	4025
•			
Gietz	AC_ACCOUNT	8300	8300

20 rows selected.

#### **Summary**

#### In this lesson, you should have learned how to:

- Perform calculations on data using functions
- Modify individual data items using functions
- Manipulate output for groups of rows using functions
- Alter date formats for display using functions
- Convert column data types using functions
- Use NVL functions
- Use IF-THEN-ELSE logic

#### **Practice 3: Overview of Part 2**

#### This practice covers the following topics:

- Creating queries that require the use of numeric, character, and date functions
- Using concatenation with functions
- Writing case-insensitive queries to test the usefulness of character functions
- Performing calculations of years and months of service for an employee
- Determining the review date for an employee
